FOR IMMEDIATE RELEASE

Apricena, Italy- Thinkative Unveils a New Way to Turn Sketches into 3D Models

Thinkative, an innovative tech startup from Italy, is excited to announce its latest creation: an AI platform that can turn simple 2D sketches into detailed 3D models. This new tool is set to change the way designers, architects, engineers, and artists work, making it easier to go from a simple drawing to a complete 3D design.

Our new technology uses advanced AI to understand and turn hand-drawn sketches into realistic 3D models. It's perfect for professionals and beginners alike, offering a simple way to bring creative ideas to life.

Vincenzo Tartaglia, CEO of Thinkative, shares his enthusiasm: "We're thrilled to bring this new technology to the world. It's not just about making 3D models from sketches; it's about giving creators the power to see their ideas come to life quickly and easily."

This technology is making waves in various industries, including architecture, digital art, interior design, product development, automotive design, animation, urban planning, landscape architecture, educational tools, fashion and others.

Additionally, the platform will feature a unique plugin system, allowing users to create, sell, and download plugins from each other, fostering a collaborative and dynamic community that enhances the tool's capabilities and user experience.

To be one of the first to try out this new way of designing, join the waitlist on Thinkative's website at <https://www.thinkative.tech/>.

About Thinkative: Thinkative is a forward-thinking tech company in Apricena, Italy. It was started by a group of passionate Italian innovators. Our goal is to create tools that make it easier to turn imaginative ideas into real designs. We aim to help creators and designers by giving them tools that boost their creativity and make the design process smoother.
